PURITY Finest optimised water, with its ideal mineral composition, releases the individual aromas in each espresso from the ground coffee and, therefore, supports the development of the authentic espresso taste.

Elements that negatively affect taste and aroma (such as chlorine) are removed. In addition, the water allows the perfect crema to develop in terms of colour and consistency.

The benefits to you
- Optimised water for espresso preparation and optimum machine protection
- Unique, intensive espresso taste with full body and authentic aroma
- A thick, golden-brown crema that lasts
- Optimum results for all espresso based coffee specialities
- Reliable protection for professional coffee machines from limescale and gypsum deposits
- Reduction of elements that negatively affect aroma and taste

Environmental protection and recycling are part of the BRITA corporate philosophy. BRITA established a recycling programme for exhausted filter cartridges. Since 1992 all parts of BRITA cartridges can be completely re-processed so that the materials can be recycled.
**Systematic filter technology**

1. **Pre-filtration**
   A fleece at the inlet reliably retains coarse particles and, with its laminar water distribution, ensures a high utilisation of the downstream filter medium.

2. **Total hardness reduction**
   The filter medium reduces the total hardness and clearly reduces limescale and gypsum deposits.

3. **Activated carbon filtration**
   All of the water runs through an activated carbon filter, so substances that have an adverse effect on the taste and aroma are removed.

4. **Fine filtration**
   At the end of the filtration process another fleece retains fine particles.

---

**Quality and safety**

- **Optimum water quality**
  Outstanding and consistent water quality – free of unwanted taste and aroma elements.

- **Maximum product safety**
  For uninterrupted operation and safe use.

- **Simple to use**
  Operation is simpler and easier than ever.

The food safety of BRITA Professional water filter products is tested and monitored by independent institutes. Electronic components are CE-certified and labelled.

<tbody>
<tr>
<td>Capacity at a total hardness of 10°dH (0% bypass setting)</td>
<td>4,400 l</td>
<td>8,150 l</td>
</tr>
</tbody>
</table>

Comparable capacity according to DIN 18879-1:2007: The comparable capacity is a standardised indicator to facilitate comparison of different filters. The comparable capacity is determined under extreme conditions. Normally the usable capacity in practical operation is clearly higher than the comparable capacity and may vary greatly depending on the usage conditions.

**Explanatory notes**

1. The capacities given have been tested and calculated on the basis of normal application and machine conditions. Due to external influences (e.g. variations in raw water quality and/or machine type), deviations from these results can occur.

2. PURITY Finest cartridges must be operated with a bypass setting of 0%.

Only drinking water quality may be used as the water supply for BRITA water filters.
