

BRITA ThermalGate™

Hygiene feature: BRITA's powerful thermal disinfection solution.

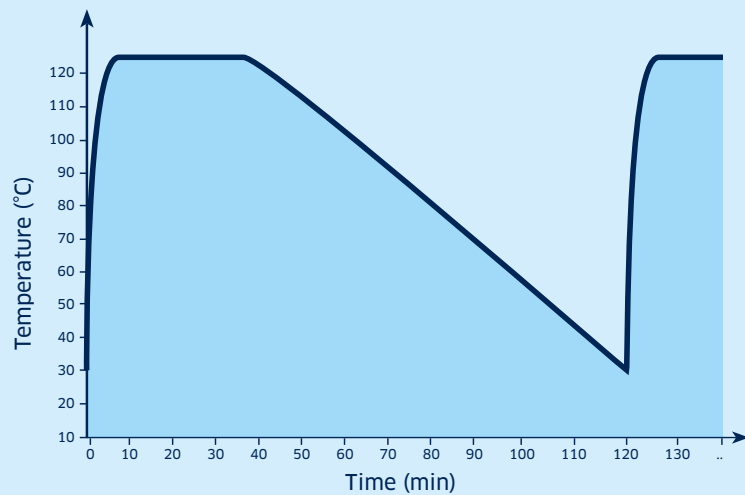

The tap of a typical water dispenser is exposed: a sneeze or touch of a hand, for example, can introduce germs. Without a robust safeguard, microorganisms on the wet tap can go on to contaminate the dispenser. That's why our BRITA VIVREAU dispensers include our ThermalGate™ feature. This automatically and regularly heats the tap to disinfect it. So you can sit back and relax – knowing you have a proactive, powerful defence against germs, tried and tested by an independent laboratory (Hygiene Institut des Ruhrgebiets).

ThermalGate™
Protects against retrograde contamination.

The tap is automatically heated to over 125°C at regular intervals for thermal disinfection.

ThermalGate™ is continuously active, providing protection not only at peak times, but also during periods of inactivity, e.g. at night or on weekends

Does not require manual effort or chemical additives

Developed on the basis of over 20 years' experience in the healthcare market.
